

Ihnatov Valentyn

Game UI/UX Designer, Generalist

Work experience: 5+ years

I am a versatile interface designer specializing in creating modern interfaces that capture attention and provide a seamless user experience. I am proficient in all stages of interface development, including research, wireframing, prototyping, conceptualization, and art direction. I excel in creating flexible and adaptive design systems. My toolset includes traditional software like Photoshop and Illustrator, as well as Sketch and Figma. I actively use neural networks for various graphic-related tasks. Have experience in branding, creating corporate identities, and designing presentations. I am skilled in animations and videos, capable of producing vector digital art and hand-drawn illustrations. Additionally, I have a strong ability to replicate existing designs and adapt new concepts to align with established styles.

Have been working in the gaming industry for two years, preceded by three years in mobile and web design. Overall, my experience in the industry spans over 10 years.

Worked on diverse projects across different domains, including mobile 3D RPGs on Unity, casual puzzle games, gambling projects, and crypto-NFT projects. I have also developed an arcade racing game, a multiplayer shooter, and more.

Previously, I have worked in outsource-product companies, focusing on user interfaces for mobile applications, websites, e-commerce projects, handling marketing and branding tasks.

Seeking a long-term, full-time position.
